

Numen transforms organizations with its next-generation ECM platform.

The Easyfolder platform brings simplicity, security and performance to all processes thanks to its modern, fully open and modular design.

Numen is proud to announce the large-scale commercialization of its new content management platform developed over several years in Agile methodology. Built on a 100% CMIS server core, based on a powerful EDM (Electronic Document Management) engine and architected by service layers (micro services), this platform provides answers tailored to the most diverse customer issues. Depending on the process, the platform calls on demand capturing services, OCR, workflows, checks on documents and repositories, electronic signature, issuance of letters, archiving and secure consultation ... A unique platform, countless possibilities!

Meeting new needs

Faced with the explosion of structured and unstructured content, the growing need for secure data and processing (GDPR), the development of analytics, the constant search for operational efficiency and customer satisfaction, the content services platforms stand out as a key factor in any successful digital transformation.

"EDM solutions have been a key element of information systems for years. Today, in the cloud computing age, the transition from a monolithic EDM, more or less connected and reserved for one or two business units to an agile ECM solution totally interconnected with the rest of the business tools is a necessity." said Laurent Richardeau, Deputy General Manager at Numen Solutions, before adding: "We see it every day with our customers, the objective is always simple: deploy transversal processes and accelerate, or even automate, treatments and collaboration between the various internal or external stakeholders."

Bringing Content and Data closer

"Bringing together Content Management and Data Management through a single platform and optimizing the process of capturing information, digitizing processes and securing data and documents is the promise of Easyfolder ECM. And there are many use cases: subscribing, financing, HR on-boarding, customer care, purchasing and accounting... " explained Marc Le Vernoy, CEO of Numen Group.

Reconcile business and IT departments

The Easyfolder ECM platform attracts both business and IT professionals thanks to its SaaS first design, its APIs, its modules and its independent micro services.

From an IT point of view, Easyfolder considerably simplifies the work of the IT department by allowing to connect and disconnect in a few days, by making the integration more fluid, by guaranteeing the interoperability of the systems between them, while increasing the overall security of the information system.

As far as business lines are concerned, deployment projects are counted in days instead of months, data and documents are easily accessible, available at any time, from any location, from any device. Intuitive interfaces make the work nice and enhance productivity.

About Numen

As a service provider of IT solutions, hosting and dematerialisation, Numen is committed to working with their customers in their digital transformation projects, optimising customer relations and back offices, managing their documents and enhancing their cultural and sensitive contents. With 980 experienced employees, Numen is a reliable technological partner for more than 500 clients, varying from banking, insurance, real estate, medical, publishing, distribution, culture, industry, human resources, as well as European institutions and public organisations.
